Current and Future Obesity Rates

Projected Increase in Costs for Health Care and Lost Productivity

By 2030, medical costs associated with treating preventable obesity-related diseases are estimated to increase by \$48 billion to \$95 billion per year in the United States, and the loss in economic productivity could be between \$390 billion and \$580 billion annually by 2030. Although the medical cost of adult obesity in the United States is difficult to calculate, current estimates range from \$147 billion to nearly \$210 billion per year.

A contemporary form of poverty

RURAL STUDIO AT TWENTY

Frederic Rentschler, Oppenheimer Dean, and Hursley

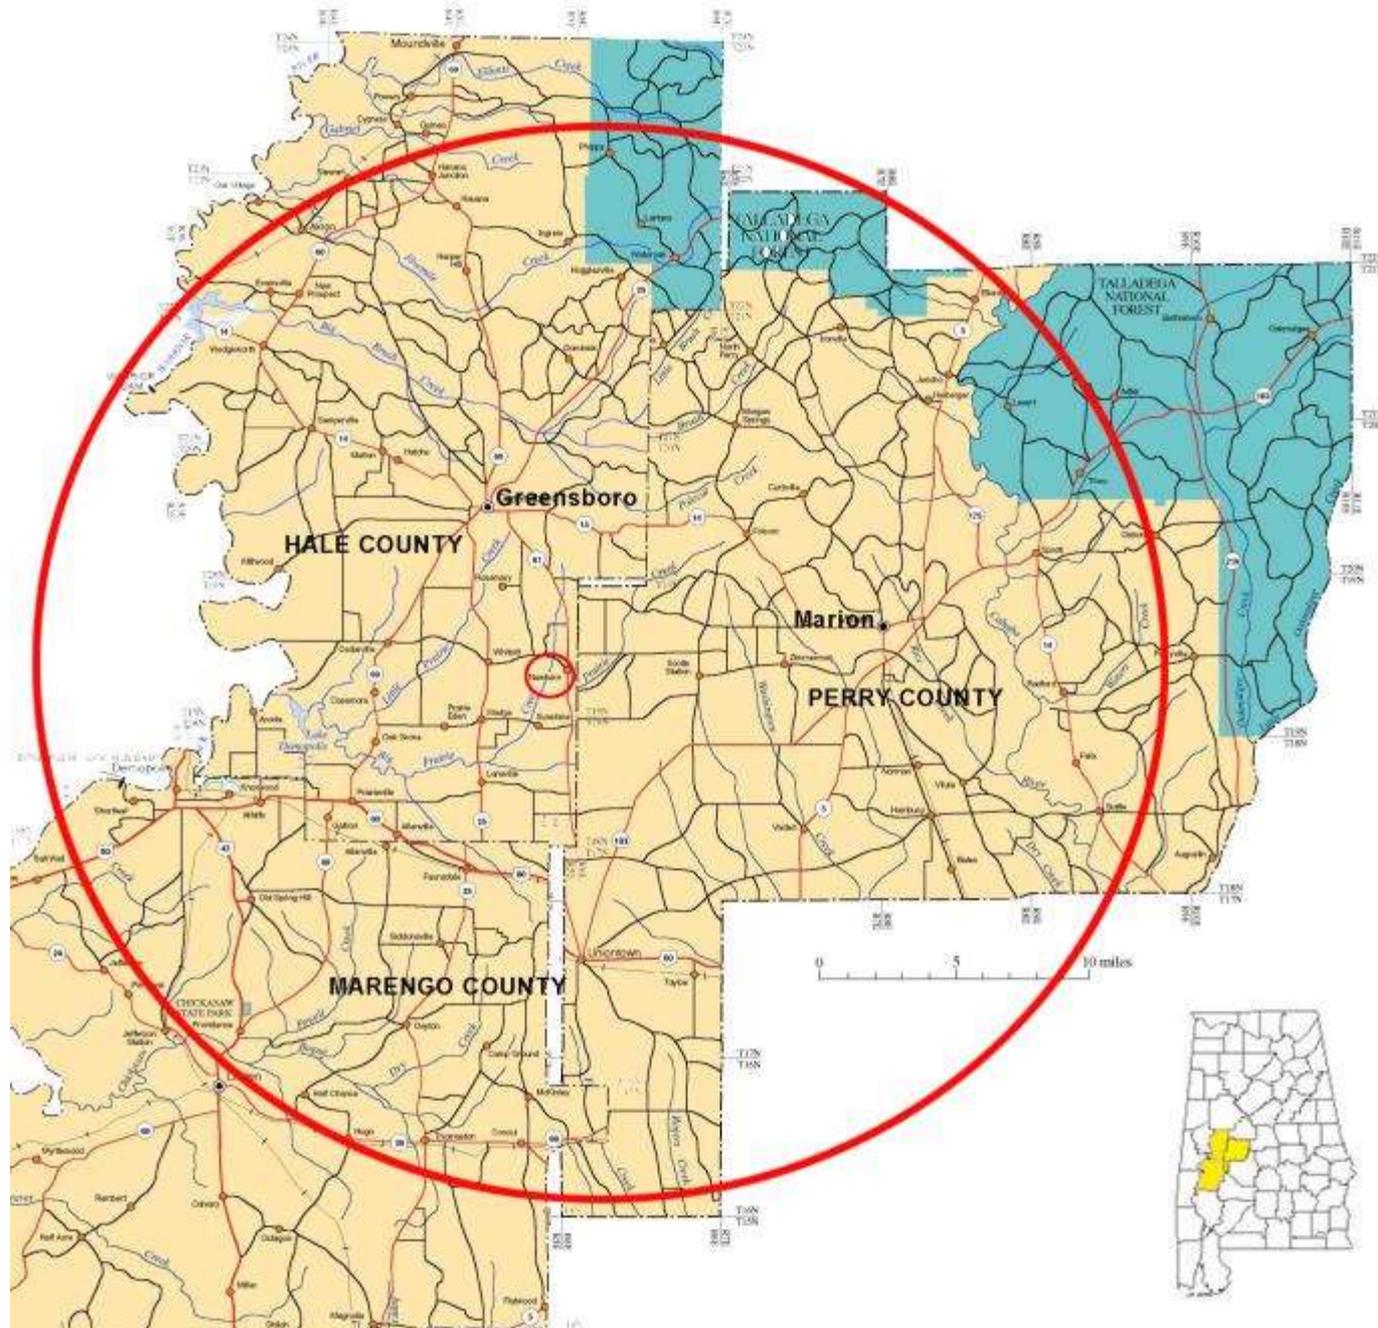

"I am inspired by the beautiful, ethical work Rural Studio has been engaged in for the past twenty years, and the radical way in which it has woven together architecture, social responsibility, and sustainability. Rural Studio instills an unwavering commitment to the community in its students, teaching them to become 'citizen architects': stewards of the land, deeply creative thinkers, and powerful agents of environmental and social change. The program should be a model for the rest of the country!" —ALICE WATERS

"*Rural Studio at Twenty* updates the late Samuel Mockbee's poetic vision with Andrew Freear's sustained, shining accomplishments. Today, when the student ethos has shifted from theoretical and abstract concerns to public interest architecture, Auburn University's Rural Studio serves as a beacon internationally. In this excellent book, we see the place, hear the voices, witness the evolution." —ROBERT IVY

"The work of Rural Studio is the spiritual soul of architecture's possibilities. Shelter, home, community—against tough odds students, clients, and communities come together to make magic and enrich us all through their efforts and their legacy." —TOM KURDIG
